

NASTAD-HAITI: HIGHLIGHT

Diagnostic HIV Cases reported from 2005-2010

NASTAD's Global Program has been working with Haiti's Ministry of Health since 2003. Much of NASTAD's work in Haiti has focused on evaluating, planning, expanding, and supporting comprehensive HIV/AIDS surveillance, including a national case-based HIV/AIDS case surveillance system. Two types of case-based HIV/AIDS epidemiologic reports have been produced for the Ministry of Health: an HIV/AIDS Epidemic [summary](#), and a Six-Year Trend Data [presentation](#). These reports are based on a unique count of HIV/AIDS cases, rather than the more frequently used aggregate program monitoring and evaluation. In September, NASTAD will host a training for the Haitian Ministry of Health to begin transition of the system and its data management and use capabilities.
