

The Hilltop Institute

Data Sharing Success: HIV Surveillance and Maryland Medicaid

Presented by: Parker James, Policy Analyst
The Hilltop Institute
NASTAD's National HIV and Hepatitis Technical
Assistance Meeting
October 12, 2023

UMBC

Overview

The presentation today will cover the following:

- Maryland Medicaid HIV Initiative project background and team
- Data use agreement
- Data matching between HIV and Medicaid
- Viral load suppression in Maryland Medicaid
- Using the data for quality improvement
- Next steps and challenges
- Conclusion

Maryland Medicaid HIV Initiative

continued

- HRSA-funded Special Projects of National Significance
- Multi-state collaborative as the Systems Coordination Provider (SCP)
- Five-year project (2021-2025)
- National partners:
 - National Alliance of State & Territorial AIDS Directors (NASTAD)
 - AcademyHealth
 - University of San Francisco, HEALTHQUAL
 - Georgetown University
 - Killelea Consulting
- Focuses on the improvement of viral load suppression via reporting of the HIV Viral Load Suppression (HVL-AD) now reported with CMS Adult Core Set

Maryland Medicaid HIV Initiative

continued

- Overall State Collaborative Aim: Improve HIV viral load suppression for Medicaid beneficiaries living with HIV in the U.S.
- Goals:
 - Develop capacity to share high quality HIV viral load data between HIV surveillance and Medicaid
 - Integrate HIV viral load into clinical quality measure (CQM) infrastructure and systems
 - Strengthen cross-agency collaboration
 - Use HIV viral load data to improve HIV viral suppression among Medicaid recipients with HIV

Maryland's Team

Maryland Medicaid

Alyssa Brown:
Co-Lead

Nancy Brown:
Quality Champion

Meredith Lawler: Analyst

Prevention and Health Promotion Administration (PHPA)

Colin Flynn:
Co-Lead

Morgan Boyer:
Data Lead

Joseph Duda: Analyst

Maryland's Team continued

The Hilltop Institute

Alice Middleton

Dr. Lucy Wilson:
Clinical Lead

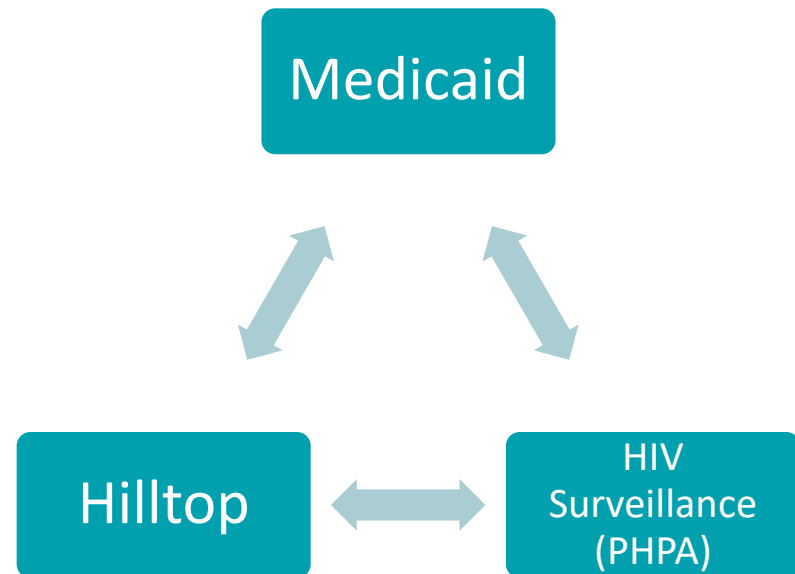

David Idala

Parker James:
Data Lead

Organizational Collaboration

HIV Affinity Project

- Previously, our team participated in the HIV Affinity project. This project provided the groundwork for data matching between surveillance and Medicaid.
- PHPA, Hilltop and Medicaid had an existing data use agreement (DUA) in place from the project:
 - Only minor adjustments were needed to update for viral load data
 - Covers both HIV and Hepatitis C
- This collaborative relationship facilitated participation in the HIV Viral Load Suppression initiative

DUA: Medicaid and HIV

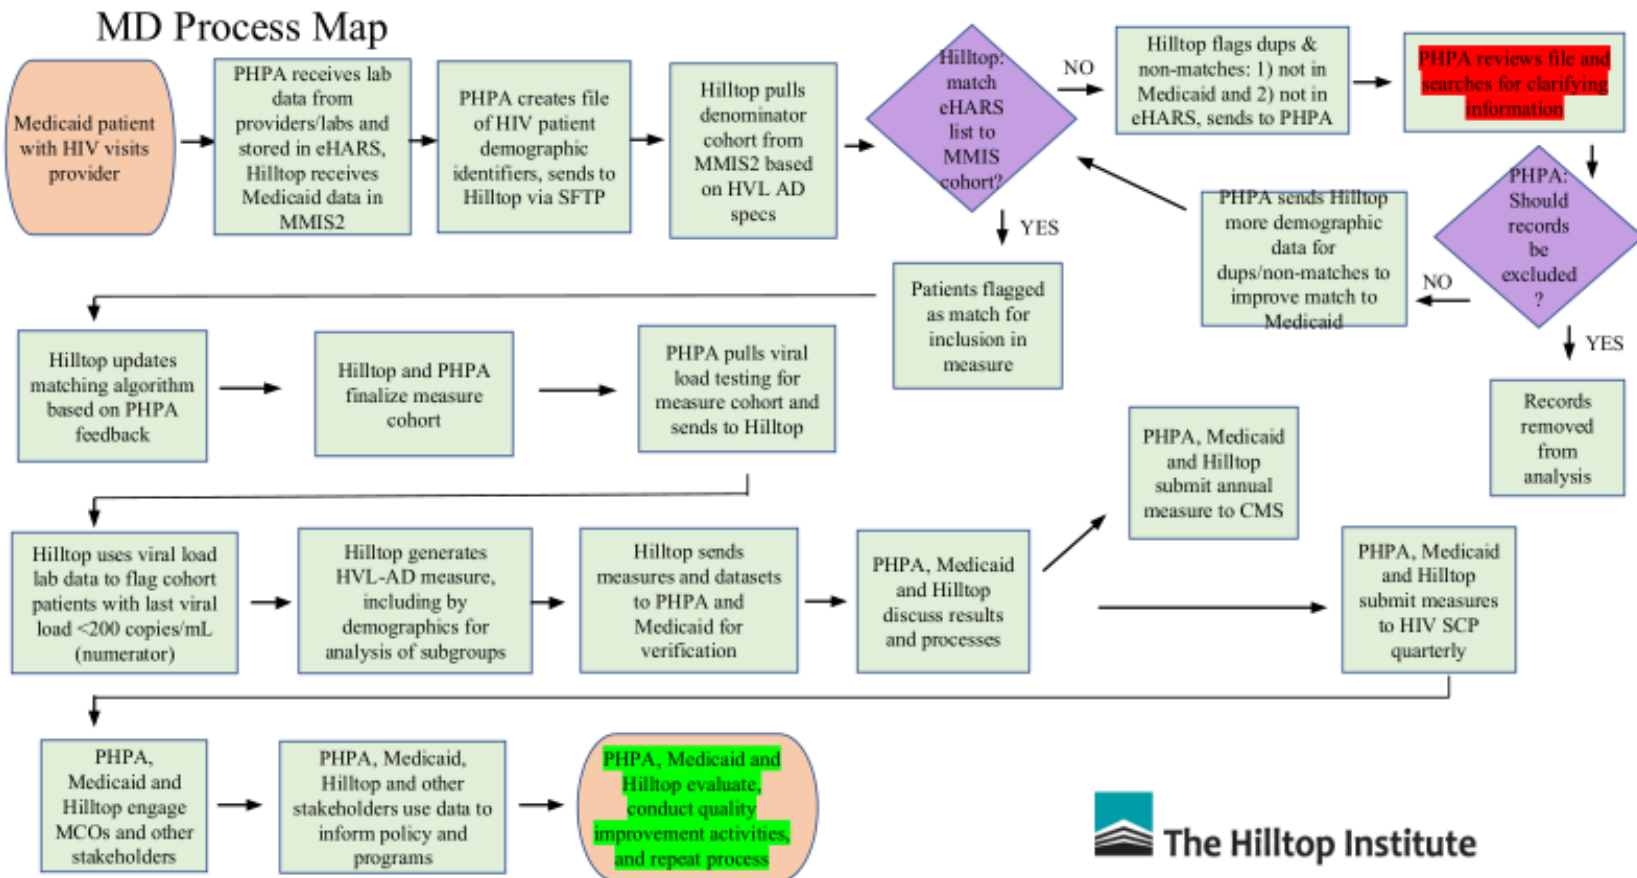

- Data Use Agreement renewed between Hilltop, Medicaid and HIV Surveillance
- DUA was updated to include:
 - Viral load lab data
 - Additional variables from eHARS to support reporting of the viral load suppression measure
 - Expanded years of analysis
 - Additional data elements by mutual agreement to support analyses
- DUA extended in 2022 through September 2027
- Hepatitis C data is also included
- Hilltop has a separate agreement with Medicaid regarding data from the Medicaid Management Information System (MMIS2)

Maryland Medicaid HIV Initiative

continued

- Participation in the collaborative includes:
 - Semi-annual Learning Sessions
 - Monthly internal meetings
 - Technical assistance calls
 - Webinars
 - Affinity groups
 - Semi-annual reporting
 - Quality assurance and quality improvement tools
 - Documentation
- With our DUA in place, Maryland was able to move forward with matching data and generating the measure

Documentation: Maryland's Process Map

Medicaid HIV Data Match Process

- The match process uses the following variables: First Name, Last Name, DOB, SSN, and Medicaid ID (Current and Original)
- Hilltop uses a SAS program to match HIV records to Medicaid, flagging the following:
 - Match 1: Name, DOB, SSN
 - Match 2: SSN
 - Match 3: Name, DOB, last 4 digits of SSN
 - Match 4: Name & DOB
 - Match 5: Medicaid ID – Current
 - Match 6: Medicaid ID – Original
- PHPA then evaluates the matches based on strength. A person with all 6 flags is a verified match. Weaker matches will only have one or two flags (example: SSN alone).

Results

Table 1. Preliminary HIV Viral Load Suppression Adult Core Set Measure (HVL-AD), CY 2021

Age	Numerator (Viral Load Suppressed)	Denominator (HIV with Visit)	% Viral Load Suppressed
18-64	6,016	7,695	78.2%
65+	555	659	84.2%
Total	6,571	8,354	78.7%

Results

continued

Maryland's team has disaggregated HVL-AD by the following:

- **Age Group***
- **Race and Ethnicity**
- Sex
- **Region and County**
- **FFS and MCO**
- Any Medicaid Mental Health Service
- **Any Medicaid Substance Use Service**

*Bolded: disparities identified

Viral Load by Age

Percent Suppressed by Age Group

Virally suppressed: \leq 200 copies/ml at end of measurement year

Medicaid viral suppression (HVL-AD measure) is preliminary for CY 2021

Viral Load by Region

Percent Suppressed by Region

Virally suppressed: \leq 200 copies/ml at end of measurement year

Medicaid viral suppression (HVL-AD measure) is preliminary for CY 2021

Using the Data

- What have we done with the data?
 - Reported CY 2021 to CMS
 - Presented progress in the collaborative
 - Evaluated and refined match process
 - Disaggregated by key populations
 - Framing project within larger ongoing priorities (e.g. Ending the HIV Epidemic; health equity)
 - Engaged a clinical champion
 - Met with Medicaid policy staff to discuss quality improvement strategies
 - Presentation to Medicaid Director
 - Presentation to Medicaid managed care organizations

Next Steps

- Engaging our clinical lead to identify opportunities to use data
- Finalizing data for CY 2022 by December, 2023
- Developing an action plan with measurable quality improvement (QI) goals
- Presenting to additional stakeholders
- Working with stakeholders to refine and implement QI strategies
- Ensuring sustainability

Maryland Medicaid HIV Initiative

continued

- Challenges
 - Developing a standardized process
 - Time constraints and burden of reviewing matches
 - Competing priorities
 - As we progress, we are considering data sharing limitations
- Opportunities
 - Hilltop working closely with PHPA to refine HIV related Medicaid measures
 - Exploring possibilities with Hepatitis C data
 - Increasing awareness of HIV programs and resources

Conclusion

- Maryland is making valuable progress toward the goals of the collaborative.
- The data use agreement between HIV, Medicaid and Hilltop has enabled data sharing for quality measurement.
- Maryland has identified viral load suppression rates for Medicaid and disaggregated by key populations.
- Our team has started presenting to stakeholders and developing quality improvement goals.
- This collaboration has strengthened relationships between HIV, Medicaid, and Hilltop, and we will continue to build off this momentum.

About Hilltop

The Hilltop Institute is a nonpartisan research organization at the University of Maryland, Baltimore County (UMBC) dedicated to improving the health and wellbeing of people and communities. We conduct cutting-edge data analytics and translational research on behalf of government agencies, foundations, and nonprofit organizations to inform public policy at the national, state, and local levels.
